AI Summary

****Product:**** Selleys Polyglaze Car Cleaning & Protection Range ****Brand:**** Selleys ****Category:**** Automotive Car Care & Detailing ****Primary Use:**** A complete 8-product range for cleaning, polishing, protecting, and restoring vehicle paintwork, glass, tyres, and interior surfaces.

Quick Facts - ****Best For:**** DIY home detailers and experienced car care enthusiasts seeking professional results by hand - ****Key Benefit:**** Full-spectrum car protection from a single trusted Australian brand, covering every surface from paint to glass, tyres, and interior - ****Form Factor:**** Multiple forms, liquid, paste, spray, and gel depending on product - ****Application Method:**** Apply by hand using foam applicator or microfibre cloth, working panel by panel on a clean surface

Common Questions This Guide Answers 1. How often should I wax my car? → Every three to four months; more frequently for vehicles parked outdoors or exposed to harsh conditions 2. Do I need to polish before waxing? → Not always — only when removing surface marks, oxidation, or swirl marks; otherwise wash and wax is sufficient for maintenance 3. Can Selleys Polyglaze products be applied by hand without a machine polisher? → Yes — every product in the range is designed to deliver professional results by hand; a machine polisher is optional, not required

Car Cleaning & Protection — Selleys Polyglaze

Keeping your car looking its best takes the right products and a bit of know-how. Selleys Polyglaze covers both, whether you're washing the car on a Saturday morning or doing a proper detail from scratch.

Why Car Protection Matters

Your car takes a beating every day. UV rays, road grime, bird droppings, and airborne contaminants all chip away at your paintwork, and without protection, that damage adds up faster than most people expect.

The good news is that with the right products, you can protect the finish, restore the shine, and keep things looking sharp, all by hand, with results that hold up.

The Selleys Polyglaze Car Care Range

Selleys Polyglaze has been trusted by Australians for generations. The range covers everything you need to clean, protect, and restore your vehicle's appearance, from the paintwork to the glass, tyres, and interior.

Here's what the full range delivers:

Car Wash & Wax

****Get a showroom shine with every wash.****

Selleys Polyglaze Car Wash & Wax cleans and protects in a single step. The concentrated formula lifts dirt and grime while laying down a protective wax layer that repels water and enhances gloss.

****Key results:**** - Deep cleans without stripping existing protection - Leaves a water-repelling shine - Safe on all automotive paint finishes - Concentrated formula, a little goes a long way

****How to use:**** 1. Rinse the vehicle to remove loose dirt 2. Mix Car Wash & Wax with water in a bucket 3. Wash the car using a sponge or wash mitt, working from top to bottom 4. Rinse thoroughly and dry with a chamois or microfibre cloth

Liquid Car Polish

****Restore your paintwork to its best.****

Over time, paint loses its depth and clarity. Selleys Polyglaze Liquid Car Polish cuts through light oxidation, fine scratches, and surface contaminants to bring back that deep colour and gloss.

****Key results:**** - Removes light scratches and swirl marks - Restores colour depth and clarity - Leaves a high-gloss protective finish - Suitable for all paint colours and finishes

****How to use:**** 1. Wash and dry the vehicle thoroughly before polishing 2. Apply a small amount of polish to a foam applicator or soft cloth 3. Work in small sections using circular motions 4. Buff off with a clean microfibre cloth to reveal a high-gloss finish

****Pro tip:**** Work in the shade or when the panel is cool to the touch. Direct sunlight causes polish to dry too quickly, making it harder to buff off cleanly.

One Step Polish & Wax

****Clean, polish, and protect, all in one go.****

When you want solid results without spending all day on the job, Selleys Polyglaze One Step Polish & Wax is the answer. This formula cleans, polishes, and applies a protective wax layer in a single application.

****Key results:**** - Cleans, polishes, and protects in one step - Removes light surface marks and oxidation - Delivers a deep, glossy shine with wax protection - Saves time without cutting corners on quality

****How to use:**** 1. Wash and dry the vehicle 2. Apply One Step Polish & Wax to a foam applicator or soft cloth 3. Work in small circular sections 4. Buff to a high-gloss finish with a clean microfibre cloth

Paste Wax

****Maximum protection. Long-lasting shine.****

For the best paint protection available in the range, Selleys Polyglaze Paste Wax creates a hard, durable barrier that shields your paintwork from UV rays, water, and environmental damage.

****Key results:**** - Creates a hard, durable protective layer - Superior UV protection to prevent paint fade - Deep, rich gloss finish - Long-lasting protection that outlasts liquid waxes

****How to use:**** 1. Ensure the car is clean and free of polish residue 2. Apply a thin, even layer of Paste Wax using a foam applicator 3. Allow to haze (typically 5–10 minutes) 4. Buff off with a clean microfibre cloth using straight, overlapping strokes

****Pro tip:**** Apply Paste Wax in thin layers. A thin, even coat is more effective than a thick application, and it buffs off cleanly every time.

Tyre Black

****Make your tyres look as good as the rest of the car.****

Dull, faded tyres let down an otherwise well-kept vehicle. Selleys Polyglaze Tyre Black restores that deep black finish and protects rubber from cracking and UV damage.

****Key results:**** - Restores deep black colour to faded tyres - Protects rubber from UV damage and cracking - Long-lasting finish that doesn't sling off - Works on tyres, rubber trim, and plastic bumpers

****How to use:**** 1. Clean the tyre surface and allow to dry completely 2. Apply Tyre Black using the built-in applicator or a sponge 3. Allow to dry before moving the vehicle 4. Apply a second coat for a deeper, longer-lasting finish

Glass Cleaner

****Crystal-clear visibility, every time.****

Dirty, smeared glass is a safety issue, not just an appearance problem. Selleys Polyglaze Glass Cleaner cuts through road film, grease, and grime to deliver a streak-free result on windscreens, windows, and mirrors.

****Key results:**** - Streak-free finish on all automotive glass - Removes road film, grease, and insect residue - Safe for tinted windows - Works on interior and exterior glass surfaces

****How to use:**** 1. Spray Glass Cleaner directly onto the glass surface 2. Wipe with a clean microfibre cloth 3. Buff dry with a second clean cloth for a streak-free finish

****Pro tip:**** For heavily soiled glass, apply a second pass before buffing dry. On interior glass, work in sections to prevent the product from drying before you can wipe it off.

Windscreen Water Repellent

****See clearly. Drive safely.****

Rain on your windscreen shouldn't slow you down. Selleys Polyglaze Windscreen Water Repellent creates a hydrophobic barrier on the glass that causes water to bead and roll away, even at highway speeds.

****Key results:**** - Water beads and rolls off the windscreen at speed - Improves wet-weather visibility - Reduces reliance on windscreen wipers - Long-lasting protection that stands up to repeated washing

****How to use:**** 1. Clean the windscreen thoroughly and allow to dry 2. Apply Windscreen Water Repellent to a clean cloth or applicator pad 3. Work in small circular sections across the glass 4. Allow to haze, then buff off with a clean, dry cloth

Interior Protectant

****Protect your interior. Keep it looking new.****

Sun, heat, and daily use take a toll on your car's interior. Selleys Polyglaze Interior Protectant conditions and protects dashboards, door trims, vinyl, and leather, preventing fading, cracking, and UV damage.

****Key results:**** - Protects against UV fading and cracking - Restores a clean, fresh appearance to interior surfaces - Leaves a satin finish, not greasy or overly glossy - Suitable for vinyl, rubber, plastic, and leather surfaces

****How to use:**** 1. Clean the surface and allow to dry 2. Apply Interior Protectant to a clean cloth or foam applicator 3. Work the product into the surface evenly 4. Buff off any excess with a clean cloth

Getting the Best Results — Professional Tips

A few habits make a real difference when you're detailing, whether it's your first time or your fiftieth.

Work in the right conditions

Detail your car out of direct sunlight and in mild temperatures. Heat causes products to dry too quickly, which makes them harder to work with and affects the final result. Early morning or late afternoon on a mild day is ideal.

Work clean

Use separate cloths for applying and buffing each product. Cross-contaminating cloths, for example using a polishing cloth to apply wax, reduces the effectiveness of both products and can introduce scratches to the paintwork.

Work in sections

Don't apply product to the entire car at once. Work panel by panel, completing each section before moving on. This keeps products workable and ensures an even, consistent finish.

Start with a clean surface

Every product in the Selleys Polyglaze range performs best on a clean surface. Always start with a thorough wash before applying any polish, wax, or protectant. Applying wax over dirt or polish residue traps contaminants under the protective layer, and that undermines the finish you're working to achieve.

Layer your protection

For maximum protection, use products in the right sequence: wash first, then polish if needed, then wax. Each step prepares the surface for the next, and the result is a finish that looks better and lasts longer.

Frequently Asked Questions

****How often should I wax my car?**** For most vehicles, every three to four months delivers reliable, long-lasting protection. If your car is parked outdoors or exposed to harsh conditions, wax more frequently to maintain the protective barrier.

****Can I use these products on a new car?**** Yes. Applying a quality wax to a new car is one of the best things you can do to protect the factory finish from the start. The sooner you establish a protective layer, the better the long-term result.

****Do I need to polish before I wax?**** Not always. If the paintwork is in good condition and you're maintaining an existing wax layer, you can wash and wax without polishing. Polish when you need to remove surface marks, oxidation, or swirl marks, then follow with wax to protect the refreshed surface.

****Is Car Wash & Wax enough on its own?**** Car Wash & Wax is a great maintenance product that keeps your car clean and topped up with wax protection. For deeper paint restoration or maximum long-term protection, combine it with Liquid Car Polish and Paste Wax as part of a full detail.

****Can I apply these products by hand or do I need a machine polisher?**** Every product in the Selleys Polyglaze range is designed to deliver professional results by hand. A machine polisher can speed up the process on larger vehicles, but it's not required. With the right technique and the right products, you'll get excellent results by hand.

The Right Product for Every Job

| Job | Recommended Product | |---|---| | Regular wash and maintenance | Car Wash & Wax | | Removing light scratches and swirl marks | Liquid Car Polish | | Full clean, polish, and protect in one step | One Step Polish & Wax | | Maximum paint protection | Paste Wax | | Restoring tyre appearance | Tyre Black | | Streak-free glass cleaning | Glass Cleaner | | Wet-weather windscreen visibility | Windscreen Water Repellent | | Protecting and conditioning interior surfaces | Interior Protectant |

Take Pride in the Result

A well-maintained car isn't just about appearances. It's about protecting your investment and taking care of what you own. With Selleys Polyglaze, you have a complete range of quality products backed by decades of proven performance.

Every formula is built to work the first time, and every step is straightforward enough for a beginner while thorough enough to satisfy an experienced detailer.

****If it's Selleys, it works.****

Frequently Asked Questions

What is Selleys Polyglaze: A car cleaning and protection product range

Who makes Selleys Polyglaze: Selleys

Where is Selleys Polyglaze trusted: Australia

How long has Selleys Polyglaze been available: Trusted by Australians for generations — exact establishment date not specified by manufacturer

How many products are in the Selleys Polyglaze range: 8 products

Does Selleys Polyglaze Car Wash & Wax clean and protect in one step: Yes

Does Car Wash & Wax strip existing protection: No

Is Car Wash & Wax concentrated: Yes

Is Car Wash & Wax safe on all automotive paint finishes: Yes

Does Car Wash & Wax repel water: Yes

Does Car Wash & Wax leave a shine: Yes, a brilliant gloss shine

Does Liquid Car Polish remove light scratches: Yes

Does Liquid Car Polish remove swirl marks: Yes

Does Liquid Car Polish restore colour depth: Yes

Does Liquid Car Polish leave a protective finish: Yes, a high-gloss protective finish

Is Liquid Car Polish suitable for all paint colours: Yes

Should you apply Liquid Car Polish in direct sunlight: No

Why should you avoid direct sunlight when polishing: Polish dries too quickly and is harder to buff off

Should the panel be cool when applying Liquid Car Polish: Yes

Does One Step Polish & Wax clean, polish, and protect simultaneously: Yes

How many steps does One Step Polish & Wax require: One step

Does One Step Polish & Wax remove light surface marks: Yes

Does One Step Polish & Wax remove oxidation: Yes, light oxidation

Does Paste Wax provide UV protection: Yes

Does Paste Wax outlast liquid waxes: Yes

Does Paste Wax create a hard protective layer: Yes

How long should Paste Wax haze before buffing: 5–10 minutes

Should Paste Wax be applied in thick or thin layers: Thin layers

Why apply Paste Wax in thin layers: Buffs off cleanly and is more effective

Does Tyre Black restore black colour to faded tyres: Yes

Does Tyre Black protect rubber from UV damage: Yes

Does Tyre Black prevent cracking: Yes

Does Tyre Black sling off: No

Can Tyre Black be used on plastic bumpers: Yes

Can Tyre Black be used on rubber trim: Yes

Does Tyre Black have a built-in applicator: Yes

Should tyres be dry before applying Tyre Black: Yes

Can a second coat of Tyre Black be applied: Yes, for a deeper and longer-lasting finish

Does Selleys Polyglaze Glass Cleaner leave streaks: No, it leaves a streak-free finish

Is Glass Cleaner safe for tinted windows: Yes

Does Glass Cleaner remove insect residue: Yes

Does Glass Cleaner work on interior glass: Yes

Does Glass Cleaner work on exterior glass: Yes

Does Glass Cleaner remove road film: Yes

Does Glass Cleaner remove grease: Yes

Does Windscreen Water Repellent make water bead off glass: Yes

Does Windscreen Water Repellent work at highway speeds: Yes

Does Windscreen Water Repellent reduce reliance on wipers: Yes

Does Windscreen Water Repellent withstand repeated washing: Yes

What does Windscreen Water Repellent create on glass: A hydrophobic barrier

Does Interior Protectant prevent UV fading: Yes

Does Interior Protectant prevent cracking: Yes

Does Interior Protectant leave a greasy finish: No, it leaves a satin finish

Is Interior Protectant suitable for leather: Yes

Is Interior Protectant suitable for vinyl: Yes

Is Interior Protectant suitable for plastic: Yes

Is Interior Protectant suitable for rubber: Yes

How often should you wax your car: Every three to four months

Should cars parked outdoors be waxed more frequently: Yes

Can Selleys Polyglaze products be used on a new car: Yes

Is waxing a new car recommended: Yes

Do you always need to polish before waxing: No

When should you polish before waxing: When removing surface marks, oxidation, or swirl marks

Is Car Wash & Wax sufficient as a standalone maintenance product: Yes

Does Car Wash & Wax replace Liquid Car Polish and Paste Wax for deep restoration: No

Can Selleys Polyglaze products be applied by hand: Yes

Is a machine polisher required: No

Can a machine polisher be used with these products: Yes, to speed up the process

Should you detail your car in direct sunlight: No

What is the ideal time of day to detail a car: Early morning or late afternoon

Should you use separate cloths for applying and buffing: Yes

What happens if you cross-contaminate cloths: Reduces effectiveness and can cause scratches

Should products be applied to the whole car at once: No, work panel by panel

Should the car be clean before applying polish or wax: Yes

What is the correct product sequence for maximum protection: Wash, then polish, then wax

Does applying wax over dirt undermine the finish: Yes

What is Selleys Polyglaze recommended for regular wash and maintenance: Car Wash & Wax

What is Selleys Polyglaze recommended for maximum paint protection: Paste Wax

What is Selleys Polyglaze recommended for wet-weather visibility: Windscreen Water Repellent

What is Selleys Polyglaze recommended for restoring tyre appearance: Tyre Black
